► Mechanix Wear - Glove Light

No longer do you need to juggle a flashlight while working in the dark spaces under the car, hood or dash, or completing late night repairs. The Mechanix Wear Glove Light offers all the protection and dexterity of the Mechanix Wear Original Glove with the added feature of a bright LED beam for enhanced visibility. Best of all, Glove Light gloves have easily accessible, replaceable batteries and are fully washable.

Mechanix Wear: 800-222-4296

► HKS - SR20DET High-RPM Head Systems

HKS Head Systems have been engineered to increase the RPM range of the Nissan SR20DET engine. The Step 2 Head System for HKS Step 2 Camshafts allows the SR20DET engine to rev to 8000RPM and includes HKS Valve Springs, Black Coated Rocker Arms, and Retainers. The HKS Black Coated Rockers Arms have been specially treated to increase strength and durability while the HKS Retainers' unique design allows it to secure valve shims at high RPM compared to the OEM retainers. The Step 3 Head System is designed specifically for HKS Step 3 Camshafts and for a 9000RPM redline and includes all the components in the Step 2 system, but adds Inner Valve Springs, Solid Lifters, and Valve Stem Seals.

HKS USA: 310-491-3300

► Stance - Coilovers

Stance manufactures high quality monotube coilovers utilizing the latest suspension technology. All coilovers come with pillowball upper mounts and utilize polyurethane bushings to provide crisp and predictable handling. 15-way adjustable dampening allows user to adapt to any road conditions and set up the vehicle's handling appropriately.

Stance: 847-412-0566

► Skunk2 Racing - ProSeries PRO Camshafts

Skunk2 ProSeries camshaft profiles are derived from their highly successful racing efforts, and utilize the latest in profile design technology and dramatically improves horsepower, torque, engine response, and valvetrain stability. ProSeries camshafts feature patent pending profiles defined by specific lobe shapes as well as specific characteristics of lift, velocity, and acceleration. Unlike the competition, Skunk2 ProSeries camshafts are designed, engineered, and tested 100 percent in-house using state-of-the-art equipment and software.

Wireless Remote Control Electrical Gauges

Osiris™ OSIRIS SERIES REMOTE GAUGES

EVIL™ EVIL SERIES REMOTE GAUGES

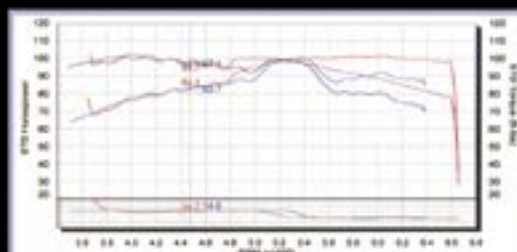

- 60mm ø Face, 52mm ø Backing
- Automatic Opening/Ending Modes
- Precision SWISS made stepping motor
- Multi-colored LED illumination (4 Mode)
- Peak value / Warning display

- Double warning function: Blinking Red LED and Beeping Sound
- Build-in Fan Controller function on Oil/Water Temp gauges
- Turbo Timer embedded function on Volt meter (40 seconds)

Available in Boost, Vacuum, Tachometer, Air/Fuel Ratio, EGT, Oil Pressure, Oil Temperature, Water Temperature, Volt.

Automobile Electrical Energy Chip Regulator

2004 Scion xB installed with EPS
Gains Up to 13HP & 15ft-lb Torque

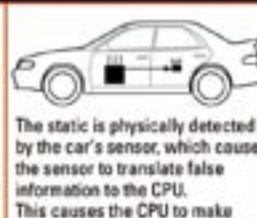

100% Metal Casing
Heat Resistance Wire Sleeve

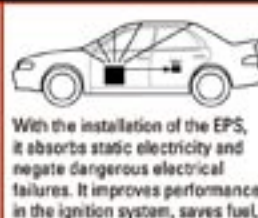

- Increase Horse Power (Dyno Proof)**
- Increase Torque (Dyno Proof)**
- Saving Fuel (About 10%)**
depending on the engine type and the driving habit
- Extend Battery & Alternator Life**
- Protect Electrical Circuit**
- Smoother Idle & Shifting**

As the car travels on the road, the friction created by the wind rubbing against the car body causes electrical static.

The static is physically detected by the car's sensor, which causes the sensor to translate false information to the CPU. This causes the CPU to make erroneous judgements that could affect the ignition system, fuel injector, ABS, and other vital electronic devices.

With the installation of the EPS, it absorbs static electricity and negate dangerous electrical failures. It improves performance in the ignition system, saves fuel, filters usable energy needed for the braking system, and maintains voltage consistency in all other electronic devices.

► e-RAM

Electric Supercharger

The e-RAM is patented and proven method of providing 4-6 percent HP gains throughout the entire RPM range of any engine. Activated automatically at full throttle, the e-RAM draws its 830 watts of energy directly from the battery, and hits 25,000 rpm in 1/10th second to produce 1 PSI boost to your intake. The ECU adjusts by adding fuel to keep the air-fuel ratio correct. More air + more fuel = more power. No other modifications are required. Due to its large 4-inch diameter, the e-RAM does not restrict air-flow when not in operation during part-throttle conditions.

► Darton Sleeves

SR20DET Dry Sleeve Kit

Innovative and purpose-built, Darton introduces the Dry Sleeve Kit for Nissan SR20DET block. What better way to gain reliable horsepower than to increase bore size while still being able to run high boost? The new Darton SR20DET Dry Sleeve Kit is made from Darton's famous high strength ductile iron and designed specifically for the Nissan SR20DET blocks. The new sleeves will be supplied for bore sizes from 86mm – 90mm. The new multi-diameter sleeve, with flats assures max-wall thickness for strength at any bore size.

Darton Sleeves: 800-713-2786

► BRIDGESTONE POTENZA RE-01R

Bridgestone's newest entry into the high performance street and track segment is the Potenza RE-01R. The Bridgestone Potenza RE-01R is a street tire for sports driving. Whether on the highway, on a straightaway, in an autocross corner or sliding through a drift course, the Bridgestone Potenza RE-01R will meet your needs. The RE-01R features a semi-slick shoulder block that provides lateral stiffness for advanced cornering force and grip on dry surfaces as well as a wide center rib for outstanding initial handling response. Cooling slits engineered in the tread help dissipate heat and make the tire more durable under high-speed, high-temperature conditions.

► GREDDY

TYPE-S SUSPENSION KITS

Designed for the optimum balance of traction, comfort, and adjustability, the new GReddy Type-S suspension kits offer the finest features like large 46mm diameter pistons in a mono-tube shock, 32-way adjustable damping, adjustable base and spring perches, thick billet upper mounts, and lightweight coil springs. Instead of the common heavy spring rates that offer harsh rides and easily lose traction on bumpy American roads, Type-S systems utilize a relatively softer spring with a longer stroke to maximize traction on the track or on the street. An added benefit of this is also a comfortable ride for the street. Applications available for many popular Japanese vehicles.

► Espelir - Low Form Springs

In accepting the challenge to develop superior suspension springs that meet governmental minimum ride height requirements while at the same time enhancing the need for road-hugging good looks, Espelir has introduced Low Form. Espelir's advanced methods and experience with vehicle lowering enable them to keep 90mm ground clearance while providing a comfortable and most importantly, stable ride.

► MoteC - i2

MoTeC is excited to announce the release of its all new i2 data analysis application. This ground breaking new software has been designed from the ground up for speed and flexibility and offers unprecedented levels of customization, enabling every user – from amateur to professional – the ability to completely

tailor their analysis and data management tools. i2 offers two levels of functionality – i2 Pro and i2 Standard. i2 Pro is available now and requires the optional Pro Analysis upgrade on MoTeC logging systems, while i2 Standard is free for all users and will be released soon.

► **Auto Meter**
Sport-Comp II Gauges

The next generation of Auto Meter's legendary Sport-Comp series has arrived! Sport-Comp II represents the latest evolution of the race-proven, "classic" Auto Meter design. Infused with superior lighting technology, Sport-Comp II is the ultimate synergy of form and function, day or night. All models feature black dials with white lettering for "at-a-glance" daytime readings. At night, Sport-Comp II instruments radiate intense, bright white light through numbers and increments utilizing Auto Meter's signature "through the dial" LED illumination. Patented, high contrast, glowing red pointers ensure accurate, easy-to-read information.

► **Miller Electric**
Syncrowave 200 Welder

Miller Electric has introduced the Syncrowave 200 AC/DC TIG/Stick welder, which features an extended power range for welding thicker materials (up to 1/4-in. aluminum in AC TIG), along with several functions that make it even easier for hobbyists or those in light industrial settings to attain professional quality welds. The Syncrowave 200 helps operators enhance weld appearance with an easy-to-use, built-in pulse control that also helps eliminate burn-through and distortion. Other features include Fan-On-Demand, Auto-Postflow, Adaptive Hot Start for stick arc and a 115V auxiliary power receptacle conveniently located on the front of the machine.
